CHART DRILL ANSWERS

D1 Reading single candles (after ep. 2)

- 1 = a long-wick rejection; 2 = a doji (indecision); 3 = a strong close.
- The highs were rejected: buyers couldn't hold higher (weakness).
- Each candle is one clue; you need trend, structure and a plan.

D2 Name the trend (after ep. 4)

- A = downtrend; B = consolidation; C = uptrend.
- Uptrend: the latest higher low. Downtrend: the latest lower high.
- Buy pullbacks in the uptrend, sell rallies in the downtrend, wait in the range.

D3 Real break or fake-out? (after ep. 6)

- A: YES, break to the downside: a body closed below the level.
- B: NO. Wick poked through, closed back inside: a sweep.
- C: YES, break to the upside: a body closed above the level.
- D: NO. Wick poked through, closed back inside: a sweep.
- E: YES, break to the downside: a body closed below the level.
- F: NO. Wick poked through, closed back inside: a sweep.

D4 Find the sweep (after ep. 10)

- A: equal highs swept; BOS closed below the level; expect price to go down toward the opposite low.
- B: equal lows swept; BOS closed above the level; expect price to go up toward the opposite high.
- C: equal highs swept; BOS closed below the level; expect price to go down toward the opposite low.
- D: equal lows swept; BOS closed above the level; expect price to go up toward the opposite high.

D5 Which gaps are real? (after ep. 16)

- 1A: NOT valid, the wicks of candles 1 and 3 overlap.
- 1B: valid bullish FVG (candle 1 high to candle 3 low).
- 1C: valid bearish FVG (candle 1 low to candle 3 high).
- 2A: valid bullish FVG (candle 1 high to candle 3 low).
- 2B: NOT valid, the wicks of candles 1 and 3 overlap.
- 2C: valid bearish FVG (candle 1 low to candle 3 high).

D6 Box the order block (after ep. 22)

- A (bearish): the up-leg that swept the high before the break; wait for a pullback up into it, then a lower-timeframe BOS down.
- B (bullish): the down-leg that swept the low; wait for a pullback down into it, then a lower-timeframe BOS up.
- Stop beyond the sweep; target the previous liquidity.

D7 Premium or discount? (after ep. 26)

- A: low 99.7, high 113.7, equilibrium 106.7. Levels: A=110.2, B=106.7, C=103.2. Bullish swing: buy from the discount: C.
- B: low 99.7, high 113.7, equilibrium 106.7. Levels: A=103.2, B=106.7, C=110.2. Bearish swing: sell from the premium: C.

D8 Everything together (after ep. 24)

- A (sell): liquidity above the highs swept (1); a close below the level breaks structure (2); pullback into the FVG inside the block (3); stop above the sweep; target the previous low.
- B (buy): the mirror image.
- Plan: bias, sweep, BOS, pullback into OB/FVG, smaller-timeframe confirmation with defined stop and target.

RISK MATH SOLUTIONS

1. $100 risk, $40 per contract: 2 contracts
2. $100 risk, $500 per contract: 0 contracts (too wide)
3. $250 risk, $150 per contract: 1 contract
4. $500 risk, $750 per contract: 0 contracts (too wide)
5. $500 risk, $80 per contract: 6 contracts
6. $50 risk, $100 per contract: 0 contracts (too wide)
7. $1,000 risk, $400 per contract: 2 contracts
8. $300 risk, $60 per contract: 5 contracts

NEWS BIAS SOLUTIONS

1. UP. Good for the left (base) currency: pair rises.
2. DOWN. Good for the right (quote) currency: pair falls.
3. UP. USD is on the left: pair rises.
4. DOWN. JPY is on the right: pair falls.
5. DOWN. Bad for the base currency: pair falls.
6. UP. Bad for the quote currency: pair rises.
7. DOWN (bias). The instructor reads USD strength as bearish for both; price may disagree, so wait.
8. SKIP. Sit out these four events entirely.
